

DELIVERING SUSTAINABLE REGENERATION CONFERENCE, 2 MARCH 2006

CLIMATE CHANGE STRATEGY WORKSHOP

FEEDBACK ON CLIMATE CHANGE STRATEGY

Transport

- ⌘ rising cost and declining value-for-money of public transport is a barrier to people using it
- ⌘ there need to be incentives for people to reduce the need to travel and use alternatives to the car
- ⌘ Aston Business Park puts on free buses to and from the city centre – this should be used as a best practice example
- ⌘ engines should be turned off when vehicles are stationary

Waste

- ⌘ Learn from Austria and other European countries
- ⌘ reuse electrical goods
- ⌘ neighbourhood recycling
- ⌘ expand battery recycling

Buildings

- ⌘ having a low-carbon building needs to be a 'keeping up with the neighbours' issue

Planning and land use

- ⌘ green roofs should be more widespread

Water

- ⌘ greater promotion of water saving measures such as showering, low-flush WCS

Energy

- ⌘ More investment in energy saving and small-scale renewable energy measures should go to the fuel poor
- ⌘ need for investment in insulation in council housing

Marketing

- ⌘ need for community champions
- ⌘ education in schools
- ⌘ the case for Personal Carbon Accounts
